

Periodontal Therapy Discount Program

Based on your most recent x-rays and clinical exam you have been diagnosed with Periodontal Disease. This disease is a progressive condition that is getting worse each day and is categorized in stages. Your current diagnosis is Stage _____.

This condition, if left untreated, will progress into the advanced stages of the disease causing extreme bad breath, bone loss and eventually tooth loss. If you reach Stage IV, we have no choice but to refer you to a specialist. At your current stage, we can work to stop the gum disease and relieve the symptoms.

We understand treating periodontal disease without insurance can be quite expensive so we are offering a discount program. This program includes today's x-rays, exam and debridement. In addition it includes your next two deep cleaning visits.

Comprehensive Exam	110.00
Necessary X-rays	85.00
Debridement	225.00
Deep Scaling Right	650.00
Deep Scaling Left	650.00
Total:	\$ 1,720.00

3 Month Program
\$999.00

For three months from today, you will also receive **20% off** other restorative services needed (crowns/fillings/partials).

To protect your smile and your investment, we will customize your cleaning schedule based on your unique oral condition. Patients whose teeth incur more plaque buildup may benefit from four maintenance appointments each year.

NOTE: Scientific research continues to support the direct relationship between gum disease and serious systemic diseases. The same bacteria that causes periodontal disease enter the blood stream and can be directly associated diseases such as heart attacks, strokes, or diabetes. Women with periodontitis may have increased risk for delivering pre-term, low birth weight babies.
